

MICHAEL HARVEY

FRONT-END ENGINEER

CAREER GOALS

Always up for a challenge, I have been working as a web developer for 6 years now. Currently, I'm a Front-End engineer at Clearlink. My team is building tools using modern front-end technologies like Gatsby, Next-JS & Contentful that help build websites for big-name brands that will sell their products.

-  Ogden, UT

CAREER

Front-end Engineer

Clearlink: Dec 2020 - Present

Was promoted to a different department to help build a custom CMS that will increase production in creating new websites and pages for all our brands.

The project we are working on uses React, GatsbyJS, Emotion, Next-JS, GraphQL, Cloudinary, and Contentful. Utilizing modern practices and technologies like yarn workspaces, webpack bundling, cypress (for testing), and storybook. We were able to significantly increase our site's speeds and performance and overall process in getting a site created and deployed.

Front-end Developer

Clearlink: July 2017 - Dec 2020

Created & maintained dozens of big brand websites while updating legacy code to meet better accessibility standards and increase performance metrics.

Was put into a position to learn unfamiliar languages in a short amount of time which ended up really benefiting me and teaching me to love the journey of development.

UI Designer & Information Technology Analyst

State of Utah : May 2016 - July 2017

Worked with different departments within the State of Utah to build websites using HTML, CSS, Wordpress and jQuery.

EDUCATION

Devmountain

2015-2016

Web Dev Bootcamp

Weber State University

2011 - 2014
